(a) Assumed recording histories, differing only before A
Relative recording rate, w
1.0
0.5
0.0
A = 426.7 Ma, oldest possible find
constant recording
earlier recording halved
earlier recording a tenth
(b) Finds, fixed-history 95% bound T, and retrospective step/delay scenarios
assumed delay d = 20 Myr: candidate ancestor t = 448.8 Ma
c = 393.47 Ma
(end of Emsian)
448.1 Ma
(a tenth: scenario)
431.0 Ma
(halved: scenario)
T = 428.8 Ma
(constant)
n = 48 guaranteed units, stacked at their oldest possible ages
