(a) Recording histories: fixed younger than A; unobserved and varied older than A
Relative recording rate, w
1.0
0.5
0.0
A = 426.7 Ma, oldest possible find
constant recording
earlier recording halved
earlier recording a tenth
(b) Finds, the 95% older bound T on record start, and the bridge to an ancestor
assumed delay d = 20 Myr: candidate ancestor t = 448.8 Ma
c = 393.47 Ma
(end of Emsian)
448.1 Ma
(a tenth)
431.0 Ma
(halved)
T = 428.8 Ma
(constant)
n = 48 guaranteed units, stacked at their oldest possible ages
